Biotinylated Anti-human TIE-1 (Cl. 6F12)

Description: Monoclonals were produced with the help of BALB/c mice using recombinant human soluble extracellular TIE-1 as the immunizing antigen. Mouse IgG₁ antibody (#6F12) from hybridomas was purified from cell culture supernatant by Protein G chromatography and then biotinylated using a standard protocol.

Host species	Mouse
Antigen:	Recombinant human soluble TIE-1 protein
Purification:	Protein G chromatography
Stabilizer:	BSA (50X)
Buffer:	0.1M Tris-Cl, 0.2M NaCl, 0.02% NaN ₃ , pH 7.4
Formulation:	lyophilized

Reconstitution: The biotinylated antibody should be reconstituted to a concentration of 50 µg/ml with sterile PBS solution containing 0.1% BSA. This solution can be stored at 4°C for at least one month without detectable loss of activity. Frozen aliquots of this solution are stable for at least 6 months when kept at -20°C. **Avoid more than one freeze-thaw cycle.**

Stability: The lyophilized antibody is best stored desiccated below 0°C. Reconstituted anti-TIE-1 is stable at 4°C for >one month or can be stored in working aliquots at 20°C for more than six months.

Specificity: The unconjugated antibody will detect native human TIE-1 in ELISA experiments and on the surface of different human cell types. The antibody can be used for ELISA experiments and Western blotting.

ELISA: Use at 1-15 µg/ml.

Western blotting: Use at 1-2 µg/ml

FACS analysis and cell sorting: Test under progress.

Optimal dilutions should be determined by each laboratory for each application.

Usage: Anti-human TIE-1 is offered for research use. Not for drug use. **Not for human use!**

Catalogue number: 101-MBi48	Size: 50 µg
