Anti-human TIE-1 (Cl. 8C9)

Description: Monoclonals were produced with the help of BALB/c mice using recombinant human soluble extracellular TIE-1 as the immunizing antigen. Mouse IgG_1 antibody (#8C9) from hybridomas was purified from cell culture supernatant by Protein G chromatography.

Host species	Mouse
Antigen:	Recombinant human soluble TIE-1 protein
Purification:	Protein G chromatography
Stabilizer:	none
Buffer:	PBS pH 7.4 w/o preservative
Formulation:	lyophilized

Reconstitution: When reconstituted in sterile water to a concentration of 1.0 mg/ml the antibody is stable for at least six weeks at 2-4°C.

Stability: The lyophilized antibody, thought stable at room temperature, is best stored desiccated below 0°C. Reconstituted anti-TIE-1 is stable at 4°C for >one month or can be stored in working aliquots at 20°C for more than six months.

Specificity: The monoclonal antibody will detect native human TIE-1 in ELISA experiments and on the surface of different human cell types. The antibody can be used for ELISA experiments, Western blotting, FACS and cell sorting.

ELISA: Use at 1-15 µg/ml.

Western blotting: Use at 1-2 µg/ml

FACS analysis and cell sorting: Test under progress.

Optimal dilutions should be determined by each laboratory for each application.

Usage: Anti-human TIE-1 is offered for research use. Not for drug use. **Not for human use!**

Catalogue number: 101-M46 **Size:** 100 µg
