

Lipophilic Cyanines

Cyanine dyes exhibit large molar absorptivities ($\sim 150,000\text{-}250,000 \text{ M}^{-1}\text{cm}^{-1}$) and moderate quantum yields resulting in extremely bright fluorescence signals. Therefore, cyanines have proven useful in several fields including photography, biology, laser technology and analytical chemistry.

MTTI offers a series of unique lipophilic cyanine dyes which may be useful for biophysical studies of lipid bilayers of cells or other artificial membranes. In particular, these compounds may be useful as molecular probes of membrane potential, for labeling lipid bilayers and for labeling hydrophobic pockets of lipo-proteins.

COMPANY PROFILE

Molecular Targeting Technologies, Inc. is a privately held US-based Biotechnology Company developing novel medical imaging products. MTTI has licensed fluorescence based technologies from PTI Research Inc. (PTIR), giving MTTI the worldwide rights to manufacture, sell and/or distribute PTIR's NeuroVue® and CellVue® product lines for *in vitro* and *in vivo* research applications.
