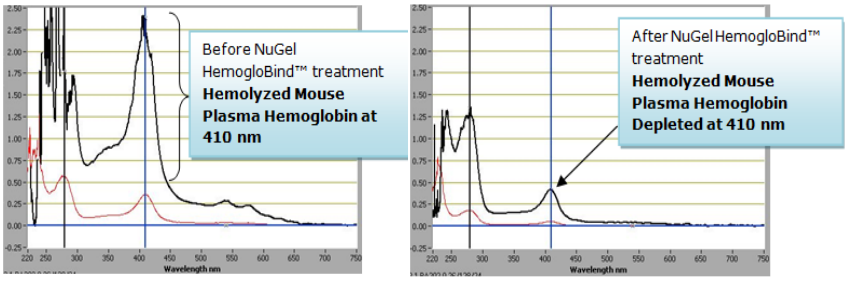
BIOTECH SUPPORT GROUP

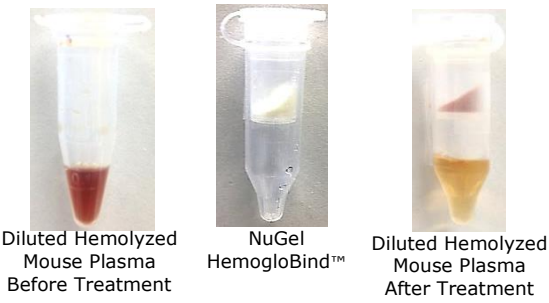
NuGel-HemogloBind™

Hemoglobin Capture Reagent From Blood and Hemolyzed Serum with NuGel™ Matrix

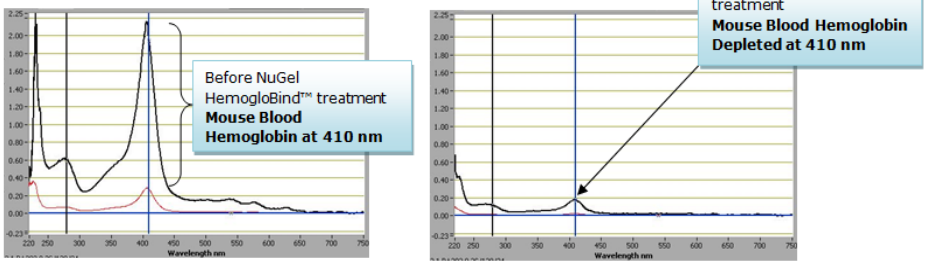
- Has a high degree of specificity for hemoglobin binding up to 10 mg/ml
- Removes hemoglobin from any species including human, sheep, bovine, goat, etc
- Removes hemoglobin from organs, tissues.
- Hemoglobin removal from red blood cell lysate for proteomics and biomarker drug discovery
- The flow through fractions(hemoglobin depleted) retain their enzymatic and biological activity
- The flow through fractions(hemoglobin depleted) is compatible with LC-MS, activity based protein profiling and proteomic studies.

NuGel-Hemoglobind™ is reengineered for increased stability. It is based on NuGel silica (50 microns in size, 1000Å) covalently bound to elastomeric polyelectrolytes. It binds >95% of hemoglobin from blood.





Diluted Hemolyzed Mouse Plasma Before Treatment | NuGel HemogloBind™ | Diluted Hemolyzed Mouse Plasma After Treatment



Diluted Mouse Blood Before Treatment | NuGel HemogloBind™ | Diluted Mouse Blood After Treatment

Product	Size	Total Sample Processed.	Item Price	Price
NuGel-HemogloBind™	25 preps	500µl of blood or 5 ml of Hemolyzed Serum or Plasma	NP-HO-T25	$450
NuGel-HemogloBind™	50 preps	1 ml of blood or 10 ml of Hemolyzed Serum or Plasma	NP-HO-T50	$850

Items Required	25 Prep	50 Prep	Reagent
NuGel-HemogloBind™	1.25 grams	2.5 gram	Supplied
Hemoglobin Binding Buffer (HB)	15 ml	30 ml	Supplied
SpinX Centrifuge tube filters	25	50	Supplied

BIOTECH SUPPORT GROUP

PROTOCOL – To Treat Blood Sample Using Microfuge Tube

1. Weigh out 50 mg of **NuGel-HemogloBind™** matrix in a microfuge tube.
2. Add 200 µl of Hemoglobin Binding Buffer to the matrix. Vortex or mix well for 2 minutes at room temperature.
3. In a separate microfuge tube, add 200 µl of Hemoglobin Binding Buffer and 10-20 µl of blood sample. Vortex for 3 minutes.
4. Add sample from step 3 to sample from step 2.
5. Vortex or mix well for 10 minutes at room temperature followed by centrifugation for 4 minutes at 10,000 rpm.
6. Collect the filtrate or supernatant which contains hemoglobin depleted sample, while the matrix contains the hemoglobin.

PROTOCOL – To Treat Hemolyzed Plasma or Serum Sample Using Microfuge Tube

1. Weigh out 50 mg of **NuGel-HemogloBind™** in microfuge tube and add 400 µl Hemoglobin Binding Buffer. Vortex for 2 minute.
2. Add 200 µl Hemolyzed Sample to step 1.
3. Vortex or mix well for 10 minutes at room temperature followed by centrifugation for 4 minutes at 10,000 rpm
4. Collect the filtrate or supernatant which contains hemoglobin depleted sample, while the matrix contains the hemoglobin.

PROTOCOL – To Treat Blood Sample Using Spin-X Tube

1. Weigh out 50 mg of **NuGel-HemogloBind™** matrix in a spin-tube.
2. Add 200 µl of Hemoglobin Binding Buffer. Vortex or mix well for 2 minutes at room temperature, centrifuge for 2 minutes at 10,000 rpm.
3. Discard the supernatant.
4. In a separate microfuge tube, add 400 µl of Hemoglobin Binding Buffer to the 10-20 µl of blood sample. Vortex or shake for 3 minutes.
5. Add sample from step 4 to the pellet sample from step 3.
6. Vortex or mix well for 10 minutes at room temperature, and then centrifuge for 4 minutes at 10,000 rpm.
7. Collect the filtrate or supernatant which contains hemoglobin depleted sample, while the matrix contains the hemoglobin.

PROTOCOL – To Treat Hemolyzed Plasma or Serum Sample Using Spin-X Tube

1. Weigh out 50 mg of **NuGel-HemogloBind™** matrix in a spin-tube and add 200 µl Hemoglobin Binding Buffer. Vortex or mix well for 2 minutes at room temperature, centrifuge for 2 minutes at 10,000 rpm.
2. Discard supernatant.
3. In a separate microfuge tube, add 400 µl Hemoglobin Binding Buffer to 200 µl Hemolyzed sample. Vortex for 3 minutes.
4. Add the sample from step 3 to the pellet from step 2. Vortex or mix well for 10 minutes at room temperature followed by centrifugation for 4 minutes at 10,000 rpm

5. Collect the filtrate or supernatant which contains hemoglobin depleted sample, while the matrix contains the hemoglobin.
