Recombinant Human Soluble Endomucin

ORDERING INFORMATION

Catalog Number:	S01-064
Size:	20µg
Storage:	< -20° C
Expressed in:	E.coli
Purity:	> 90% by SDS-PAGE & silver stain
Buffer:	10 mM NaP, pH 7.0

Scientific Background:

Endomucin (endothelial sialomucin; also Endomucin-1/2 and Mucin-14) is an 80 - 120 kDa glycoprotein member of the Endomucin family of proteins. It is expressed on endothelial cells and depending upon its glycosylation pattern, can serve as either a pro- or anti-adhesive molecule.

Formulation and Storage:

The material is stable for greater than six months at -20° C to -70° C. After the first thawing it is recommended to aliquot the material, because repeated freeze-thaw cycles will decrease the activity.

Reconstitution: The lyophilized human soluble Endomucin is soluble in water and most aqueous buffers; it should be reconstituted in water or PBS to a concentration of not lower than 100 µg/ml. **AVOID REPEATED FREEZE AND THAW CYCLES.**
